EDUCATION

Swami Keshvanand Institute of Technology, Management & Gramothan Jaipur | Jul 2021 – Jun 2025
Bachelor of Technology – Computer Science Engineering

Relevant modules: Data Structures & Algorithms, Database Management Systems, Machine Learning, Statistical Analysis, Business Intelligence, Python Programming & Software Engineering Principles

PROJECTS

Incentive Compensation System (ICM) – Kennect Platform | GenXAI Analytics Jaipur | Jan 2026 – Present

- Resolved inaccurate, manually error-prone commission payouts across multiple sales hierarchies by engineering SQL-driven incentive logic covering target allocation, achievement slabs, and payout structures - reducing manual errors to near zero through rule-based validation layers.
- Built automated payout calculation workflows processing structured datasets across 20+ sales tiers, enabling audit-ready incentive reporting, improving reconciliation transparency, and supporting finance and HR teams with accurate, scalable, and efficient reporting systems.

Enterprise FP&A Dashboard & Analytics Implementation – Power BI & Anaplan | GenXAI Analytics Jaipur | May 2025 – Jan 2026

- Identified absence of unified financial visibility across 35+ cost centres and 20 business units; designed a scalable Power BI data model integrating SAP actuals with Anaplan planning datasets, enabling near real-time tracking of Revenue, OPEX, and P&L performance, improving reporting consistency, and empowering 50+ finance stakeholders with actionable insights for faster, data-driven decision-making.
- Eliminated 40% of manual reporting effort by automating SAP-to-Anaplan workflows and deploying rolling forecast dashboards with budget-vs-actual variance analysis and scenario modelling - fully replacing legacy Excel processes and improving decision-making speed for executive leadership.

PROFESSIONAL EXPERIENCE

GenXAI Analytics Jaipur | Jan 2025 – Present
Associate Consultant

- Inherited fragmented FP&A reporting with no centralized infrastructure; led end-to-end analytics implementations from requirement gathering to golive, delivering Power BI dashboards used by 50+ stakeholders across 20 business units and 35+ cost centres, enabling standardized and scalable reporting.
- Reduced manual reporting effort by 40% by automating workflows integrating SAP actuals with Anaplan, replacing Excel-based processes with scalable, near real-time P&L and variance tracking systems, improving reporting efficiency and accessibility across the finance organization.
- Eliminated post-release data errors by implementing SQL-driven validation logic and a structured Dev-Test-Prod governance framework, ensuring zero-defect deployments and maintaining data integrity, consistency, and reliability across all enterprise analytics and reporting solutions.
- Designed KPI frameworks covering growth %, budget vs actual comparisons, and rolling forecasts, enabling advanced scenario analysis and improving financial visibility, which led to recognition with the Quarterly Top Performer award (2×) for consistently delivering high-impact analytics solutions.

Celebal Technologies Jaipur | May 2024 – Jul 2024
Cloud Intern

- Supported deployment and governance of Azure cloud data infrastructure by working with data pipelines, storage systems, and platform configurations, gaining hands-on experience in managing structured data environments used for analytics, reporting, and enterprise data processing workflows.
- Implemented data security configurations and performed structured vulnerability assessments, ensuring data integrity, compliance, and secure access; contributed to improving reliability of data systems supporting analytics and reporting use cases across enterprise cloud environments.
- Developed technical documentation and configuration reports translating cloud and data infrastructure requirements into structured, audit-ready records, improving clarity in data workflows and strengthening cross-team communication for analytics, reporting, and governance processes.

TensaX Innovation Lab Jaipur | Jul 2023 – Sep 2023
Machine Learning Intern

- Addressed slow outreach workflows by building automated data pipelines using Elastic Search, Kibana, and Logstash, extracting 10K+ profiles including email IDs, names, and job roles, reducing processing time by 60% and enabling scalable, high-volume data handling for analytics use cases.
- Designed structured data workflows by merging disparate datasets into unified, analytics-ready formats, improving data consistency and reporting accuracy, and enabling reliable, data-driven insights for product and machine learning teams across multiple use cases and decision-making processes.
- Collaborated with engineers to develop a system generating personalized LinkedIn messages under 300 characters using GPT, increasing response rates by 25% and automating targeted outreach workflows at scale for improved engagement and efficient prospect communication.

SKILLS & ADDITIONAL PROJECTS

Technical Skills: SQL, Python, Power BI, Anaplan (Model Builder), Advanced Excel (VLOOKUP, Pivot Tables, Power Query), Tableau, SAP, Microsoft Azure, Google Suite & AI Tools like Claude, ChatGPT, Zapier, n8n.

Analytical Skills: FP&A Analytics & Reporting, Financial Data Modelling, KPI Framework Design, Variance & Scenario Analysis, Incentive Compensation Modelling (ICM), Cloud Data Infrastructure, ETL Pipeline Design, Business Requirements Gathering, Stakeholder Management & Dashboard Development

Certifications: Anaplan Certified Model Builder – Level 1, 2 & 3, Anaplan Polaris & ALM Implementation, The Anaplan Way, SQL (HackerRank Certified), Advanced Excel (Udemy)

Projects: Enterprise FP&A Dashboard (Power BI & Anaplan), SQL Incentive Compensation System (Kennect), Azure Cloud Data Infrastructure (Celebal Technologies), Automated ML Outreach Pipeline (TensaX) & Multi-entity Consolidation & Rolling Forecast Model
